JSP/servlet 實作登入與寫入/讀出資料庫

張安蕎 0965 210 669 anchiao0417@gmail.com

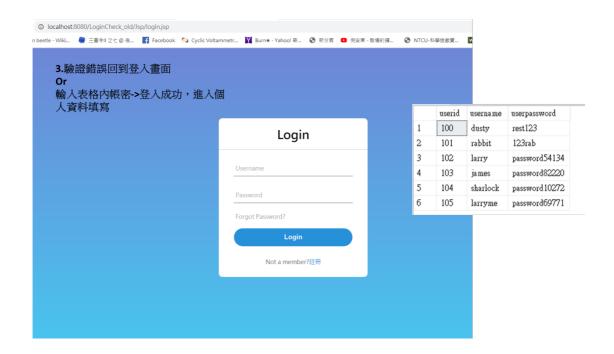

1.布置war檔

2.開啟msSQL,新增查詢並貼入" hw SQL use.txt" 語法生成測試用資料表" Users" (存放帳密)與" personalinfo" (存放個人資料)

```
Ecreate database test
 use test
dereate table Users
 userid int primary key not null identity(100,1),
 username varchar(50) not null,
 userpassword varchar(50) not null
decreate table personalinfo(
 LinkedID int primary key not null,
 hobby nvarchar(50),
 gender int,
 age int
 )
insert into Users(username, userpassword)
 values('dusty', 'rest123'),
 ('rabbit','123rab'),
 ('larry', 'password54134'), ('james', 'password82220'),
 ('sharlock', 'password10272'),
 ('larryme', 'password69771')
```

	userid	username	userpassword
1	100	dusty	rest123
2	101	rabbit	123rab
3	102	larry	password54134
4	103	james	password82220
5	104	sharlock	password10272
6	105	larryme	password69771
